KeyMark has been a leading provider of enterprise content management solutions since 1996.

Maximizing Bots. Minimizing Bottlenecks.

Robotic Process Automation (RPA) from KeyMark

Automate Manual Processes with Bots, Timers and Triggers

Robotic Process Automation (RPA) is more than a buzzword. It's a technology that's transforming the way organizations collect, review and input data. Often called "swivel chair integration," RPA eliminates the need for workers to log in and out of multiple systems in order to copy and paste data. Instead, software robots simulate – and automate – your organization's most repetitive and remedial tasks, instantly improving productivity, eliminating errors and freeing your people to focus on more important, knowledge-based work.

The beauty of RPA is that it can be deployed for virtually any business activity that involves users, data and systems—everything from websites and portals to enterprise applications, legacy systems and popular desktop applications like Excel. Because it doesn't rely on complex coding or APIs, your first robot can be created and deployed in a matter of weeks, not months.

Put a Team of Robots To Work for You Today.

Every organization has opportunities for automation. Bring us your low-skill, high-value tasks, and we'll tell you how RPA can help. Call 1-866-494-0500 or visit keymarkinc.com/rpa to schedule a demo.

RPA By the Numbers

- Can create an immediate 25-50% cost savings by automating human tasks*
- Can increase staff productivity, service levels and capacity by 35-50%
- Can consistently deliver 100% accurate data
- Can reduce process cycle times by 30-50% (average) or as much as 90% **
- Can reduce average handling time by 40%
